MEDICAL

LimeLight™ Facial

The LimeLight Facial improves skin tone and surface imperfections noted with aging and sun damage.

Treats the following conditions:

- Brown spots
- Uneven skin tone
- Tiny facial veins
- Diffuse Redness

Ideal Areas Treated:

- Face
- Neck
- Décolleté
- Hands

For optimal results, 3 treatments are recommended (may be greater number with greater sun damage) at intervals of 4 weeks.

Plan treatments accordingly as skin could take up to 2 weeks to heal.

- Localized redness and swelling may be present and typically resolves within 24 to 72 hours.
- Treated lentigines (brown spots) usually darken slowly over the next 24 to 72 hours. Epidermal melanin will darken and may leave a “coffee-ground” appearance. This usually exfoliates in an average of 7-14 days.

With any laser treatment, it is best to avoid sun exposure two weeks prior to treatment, during the course of treatment and indefinitely after treatment's are complete. Unprotected sun exposure may or may not have contributed to your condition, but it can certainly affect your results. Remember, all natural light causes sun damage and UVA is present all day long, through window glass and clouds.
