

## **CoolGlide®Vein Therapy**

### Treats the following conditions:

- Facial veins
- Spider veins
- Broken Capillaries
- Cherry Angiomas

**\*\*We DO NOT treat port wine stains or large varicose veins with the CoolGlide Laser\*\***

### Areas treated:

- Face
- Legs

During this process, the laser causes the vessel to coagulate. The vessel is destroyed and later absorbed by the body.

Number, color, and size of vessels will determine the number of treatments required. Often 1-4 treatments are sufficient. We recommend 6 weeks between treatments. Larger veins should not be retreated before 3 months.

### Post Treatment:

- Redness
- Swelling
- Blistering—rare
- Bruising can occur
- Brownish pigment may persist 6-8 weeks or as long as 6 months.

### Post Treatment (2 weeks) after treating legs:

- Support hose should be worn
- No lower body exercise
- No hot baths, hot tubs, or body wraps
- Limit alcohol intake
